

To whom it may concern,

I have recently been made aware of the actions of the National Association of Broadcasters (NAB) against satellite radio services like XM Radio, in particular NAB's petition 04-160. I have been a paying subscriber to XM Radio's satellite radio service for more than a year now and was ecstatic when they announced that weather and traffic updates for my area (Tampa/St. Pete, FL) would be available 24/7 on XM Radio. This is an incredible benefit to me, my family and all XM listeners. Without having to wait thru commercials or the typical local am/fm radio chatter, I can immediately find out what is going on with my local roads, traffic and weather. In addition, this traffic/weather service is just another much appreciated feature added to an already incredible amount of quality programming which I and many others thoroughly enjoy on a daily basis. We pay for this service of XM Radio because they offer a variety of content and services that simply aren't available elsewhere.

Please, I urge you and all who are involved in this matter to support XM Satellite Radio's ability to deliver such quality content that me and many listener's have come to rely and depend on. Deny and reject NAB's petition 04-160.

Thank you,
